

Krane Chapter 16.

	Proton	Neutron	Total
^{38}Cl	$d_{3/2}$ $\ell_p = 2$ 	$f_{7/2}$ $\ell_n = 3$ 	$I = 2$ 
^{50}Sc	$f_{7/2}$ $\ell_p = 3$ 	$p_{3/2}$ $\ell_n = 1$ 	$I = 5$ 

Generally:

- A odd $\Rightarrow I$ half-integer
- A even $\Rightarrow I$ integer
- A and Z even $\Rightarrow I = 0$

Radial functions i H for $n = 3$

21 cm radiation map, showing the distribution of neutral Hydrogen gas in the galactic disk.

Atomic Hydrogen

21 cm Dickey-Lockman

The Pioneer Space Mission 1972

The Pioneer plaques are a pair of gold-anodized aluminium plaques which were placed on board the 1972 *Pioneer 10* and 1973 *Pioneer 11* spacecraft, featuring a pictorial message, in case either Pioneer 10 or 11 is intercepted by extraterrestrial life. The plaques show the nude figures of a human male and female along with several symbols that are designed to provide information about the origin of the spacecraft.

At the top left of the plate is a schematic representation of the hyperfine transition of hydrogen, which is the most abundant element in the universe. Below this symbol is a small vertical line to represent the binary digit 1. This spin-flip transition of a hydrogen atom from electron state *spin up* to electron state *spin down* can specify a unit of length (wavelength, 21 cm) as well as a unit of time (frequency, 1420 MHz). Both units are used as measurements in the other symbols.

Spin-flip in H. 21 cm radiation

Definition of the fundamental units in the SI system

<http://physics.nist.gov/cuu/Units/current.html>

Definitions of the SI base units

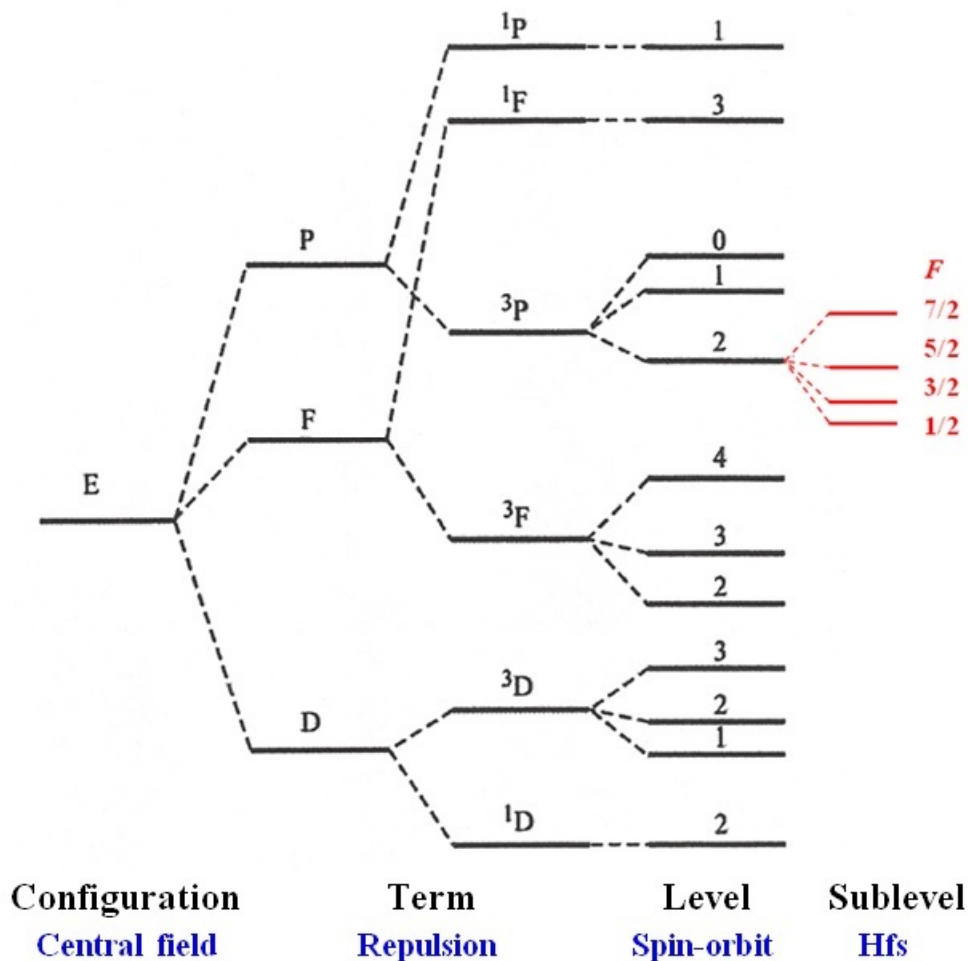

Unit of length	meter	The meter is the length of the path travelled by light in vacuum during a time interval of 1/299 792 458 of a second.	Go to historical context
Unit of mass	kilogram	The kilogram is the unit of mass; it is equal to the mass of the international prototype of the kilogram.	Go to historical context
Unit of time	second	The second is the duration of 9 192 631 770 periods of the radiation corresponding to the transition between the two hyperfine levels of the ground state of the cesium 133 atom.	Go to historical context
